

Legacy Record Indicator

Instantly Identify Patients in EHR with Archived Records

Legacy systems hold years of historical clinical data, holding valuable insights into patients' medical journeys over the years. Integrating this data with active patient records in Epic unlocks its potential and empowers better clinical decision-making and ultimately can improve patient care.

Legacy Record Indicator instantly adds a visual cue, flagging patients directly within the EHR, when the patient has an associated archived record in HealthData Archiver®. With this indicator, the user does not have to manually check for an archived record, saving time and clicks.

This feature complements the integration between HealthData Archiver® and Epic by allowing Single Sign-On from the visual indicator, in patient context.

Primary Benefits

Instant Identification

Immediately see if a patient has an archived record from the patient chart.

SSO Convenience

Access the archived patient records directly from the indicator button.

Configurable Display

Choose where the indicator appears in Epic (story board, print group, or navigation pane).

Direct Integration

Leverages HL7 v2 interface and Epic SmartData Elements.

Legacy Record Indicator for HealthData Archiver®

Features

Legacy Record Indicator utilizes HL7 interface and SmartData elements for direct integration, allowing configuration for display in various locations within the EHR. This functionality complements HealthData Archiver®'s existing integration with Epic, enabling Single Sign-On (SSO) from the indicator itself.

Connection Hub

You can find HealthData Archiver® in Connection Hub on Epic Showroom

HealthData Archiver® Prerequisites

- Single Sign-On
- MPI Backload
- MPI Synchronization
- HL7v2 interface over HTTPS

With this set of solutions powered by HealthData Integrator®, an organization can maximize its integration with Epic, improving patient accuracy and user workflows.

Legacy Record Indicator is available for hosted archives.
